/ Box Model

Text

Cheat sheet

Terminology

- **Box model:** A model that shows the properties of how the space around an element is assigned and manipulated with CSS.

Example

```
.my-class {  
  margin: 12px;  
  border: 2px solid green;  
  padding: 4px;  
  background-color: orange;  
  box-sizing: border-box;  
}
```

A Visual Review of the Box Model

The following video uses a simple HTML document with some CSS styling to practice:

- Using the browser's developer tools to inspect the box model for individual HTML elements.
- Updating the CSS for these elements to change their padding, border, and margin.
