

Exercise

Tuesday

# Introduction to Programming

## (/introduction-to-programming)

### / Git, HTML and CSS (/introduction-to-programming/git-html-and-css)

### / Practice: GitHub Pages

Text

**Goal:** Walk through the process of creating and publishing to a GitHub pages page by publishing one of our previous projects.

## Warm Up

- We need to create something called a branch to publish our content on Github pages. We'll learn more about branches later, but for now, what is the specific name we must call the branch in order for Github pages to work correctly?
- What is the easiest way to add new changes to a Github pages site after it's already been published?

## Code

### Publish to GitHub Pages

Now that you have learned how to host your web pages on GitHub Pages, go ahead and make your pet website display on GitHub Pages as well. **Everyone in the pair or group of three should take a turn to publish one site on their GitHub account to GitHub**

**Pages.** Make sure that each project properly displays for you and your partner. If it isn't working, make sure you have confirmed your email address with GitHub.
