Lesson   Weekend

Introduction to Programming (/introduction-to-programming) / JavaScript and Web Browsers (/introduction-to-programming/javascript-and-web-browsers) / Arithmetic

Text   Cheat sheet

Terminology

- `+`, `-`, `*`, and `/` are called **operators**. An operator is a special character (or characters) that indicates an action to be performed.

- `0 / 0;` returns `NaN`, which stands for *not a number*. `NaN` is a type of number.

- `Infinity` is also a number.

- **Semicolons**: We use semicolons at the end of many lines in JavaScript. We'll cover this more in future lessons.

Examples

Basic arithmetic works just like you'd expect:

```
1 + 2;
4 - 3;
5 * 6;
9 / 2;
7 + 8 * 9;
(7 + 8) * 9;
```

Keyboard Shortcuts

Here are the keyboard shortcuts to open the Chrome DevTools console:

- Windows:
  - `Ctrl + Shift + j`
  - `Ctrl + Shift + i`
- Mac:
  - `Cmd + Option + i`
  - `F12`
